

Nencki Institute of Experimental Biology

100th anniversary of the Nencki Institute The Institute's research stations and their libraries over the centuries - Exhibition

2018-01-03

In the autumn of 2018, in the Institute's building there will shown an exhibition of photographs and documents from the history of research stations at our facility. The impact of the Nencki Institute on the development of biological sciences in Poland has always been significant, and the materials collected at the exhibition document this influence in a special way. The material achievements of the Station in Hel, on the Wigry and in Pinsk disappeared in the war

turmoil. What has been managed to find will now find its place at the exhibition. Some employees' publications, library seals, photographs, documents, will be publicly shown for the first time. Of particular value are the photographs of the Pińsk station found just recently. All are welcome to visit from today!
