

# Nencki Institute of Experimental Biology

## Another product from Nencki to pharmacies

2017-03-06

The project of the National Research and Development Centre PBS1/B8/1/2012, the beneficiaries of which were the Nencki Institute PAS (Laboratories prof. Jerzy Duszyński and prof. Adam Szewczyk) and the Dr Irena Eris Scientific and Research Centre was finished in the Autumn of 2015.

The results generated during the project were published, among others, in the Journal of Investigative Dermatology, and in the Biochemical Journal. There has also been a joint patent application, which was the basis for the introduction of the new dermocosmetic series Pharmaceris V in the spring of 2016. The products are recommended for adults and children for protection and care during the day, alignment of skin color in patients with vitiligo problems and changes in de-pigmentation. A few days ago, another pharmacy product resulting from

cooperation within the project appeared in pharmacies: this time with Pharmaceris H series. It is a special shampoo H-STIMUTONE slowing down the process of graying and stimulating hair growth ([www.pharmaceris.com](http://www.pharmaceris.com)).
